

HOW IT WORKS ...

Inside of vehicles are placed GPS tracking devices which are continuously sending geo positions using GPRS connection. Tracksw.com server manages data received and provides user web applications.

TRACK.SW FEATURES ...

- different browsers (Chrome, IE, Mozilla) and OS supported (Windows, Android, iOS, Linux) on PC, tablet or mobile device
- different GPS tracker manufacturers supported, like Teltonika, Queclink, ...
- fleet overview (current state, check history, reports, stops, distance travelled)
- events via e-mail or SMS (overspeed, geofence, timetable alarm, inactivity, service period,...)
- plan optimal distance, time of route, ETA
- messaging, switching private drive (ON/OFF)
- advance reports (speed control, stops, drives, POI), data and charting module
- monitor vehicle using CAN interface (consumption, fuel level, engine speed, pedal position)
- digital and analogue sensor supported, 1-Wire sensor

BE OUR PARTNER ...

Make your own business, find clients and using our software.

We can offer you complete software package:

- GPRS communication software using MS SQL database
- Windows 2008/2012, IIS server available
- administrative tools - manage your clients and tracking devices
- hosting on your/our HW, check options on pricing plan
- branding supported (logo, link, your domain), localization
- we can offer you also tracking devices, by different producers
- installation and technical support
- custom solutions

ADVANCED FUNCTIONALITIES ...

1 1 WIRE SUPPORT

2 DIFFERENT PRODUCERS, TRACKERS

3 BIDIRECTIONAL COMMUNICATION WITH DRIVER
